

We're always looking for trouble.

Protect Your Site 24/7 with a remote CCTV monitoring system from MR Fire & Security for only £278 per week, including installation!

Between 2008 and 2009 7600 items of construction equipment was stolen from building sites throughout the UK at a cost of £36 million * so ACT now and protect your site with a remote CCTV system from MR Fire & Security Group.

How do we do that?

During the day our digital video multiplexer (dvr) stores all images from the cameras at your site, a thief is less likely to steal when they know they may be on camera even though it only takes minutes to steal or carry out vandalism. Most criminals aren't opportunists; they do their homework and they know when to strike, if you're protected they

may just go to another site where there is less chance that they may get caught. And when your staff go home at night, we stay awake to watch and protect your site.

Outside of the time parameters we agree with you, 4 strategically positioned external movement detectors together with state-of-the-art day/night colour/mono high resolution cameras are focussed on the principle entrances to the site and property, these are linked to our experienced operators based at a highly secure and accredited remote monitoring centre. Once alarms are received, they immediately see what's happening, conduct two way conversations to the unauthorised persons on your site and then action accordingly. Tell them to leave the site is a first, then call the Police, key holders, key holding Company or just about anyone you tell us to.

Protect your property and assets from theft, vandalism, and tres-

pass with our ultimate remote CCTV monitoring system. Our system is a very powerful deterrent that can stop unwanted visitors at your site, outperforming static guards and mobile patrols and at a very attractive economic solution.

To find out more, why not call now to arrange a FREE on site survey.
